Algorand Installation and Execution steps:

Windows Installation:

a.   Install Docker desktop from - https://www.docker.com/products/docker-desktop/

b.   Restart the machine if possible after installing Docker.

c.   Docker desktop works with WSL2.0 (Windows subsystem for Linux)

   i. While installing docker, it will ask to install WSL-2, please install that.

   ii. https://wslstorestorage.blob.core.windows.net/wslblob/wsl_update_x64.msi

d.   Python 3.12 or Higher

e.   Install pipx using CMD –

   i. python3 -m pip install --user pipx

   ii. python3 -m pipx ensurepath – Don't forget to fire this command.

f.   Git – From the command prompt or Git desktop version anything can be downloaded.

   i. https://desktop.github.com/

   ii. https://gitforwindows.org/

g.   Pipx install algokit
